12/14 3 bulbs per pot

14/15 2 Bulbs per pot

15/16 1 Bulb per Pot

16/18 1 bulb per pot

30-40% less than 5 buds

5-20% less than 5 buds

| Calendar dates | # weeks to Easter | Easter Lily Miracle program is a case cooled only bulb program, finishing the cooling in route fromt Europe to USA                                                                                                                                                                                                                                                                             |
|----------------|-------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 13 Oct         | 25                | Lily Bulb Production. Longi Miracle bulbs are dug, cleaned and received in the Holland warehouse no later than October 16th.                                                                                                                                                                                                                                                                   |
| 21 Oct         | 24                | Bulb programming is to be started no later than October 19th (24 weeks before Easter). Finish prepping December 2nd, ready for planting.                                                                                                                                                                                                                                                       |
| 2 Dec          | 18                | Bulb cooling completed by bulb supplier at 35-36F for minimum 42 days (1,000 Hrs); Maximum 50-days (1,200 Hrs)                                                                                                                                                                                                                                                                                 |
| 08 Dec         | 17                | Have the bulbs planted in their pots no later than 17 weeks before Easter: bulbs are case cooled by supplier. (USA bulb ship-date: 12-02-2025). Pot & water in well then allow rooting in greenhouse at 59F for up to 6 weeks. a HydraFiber® blend is recommended.                                                                                                                             |
| 29 Dec         | 14                | Roots should be visible by week 15 and shoots will emerge by week 14. Start fertilizing & keep moist.                                                                                                                                                                                                                                                                                          |
| 5 Jan          | 13                | 1"-2" tall. Prepare a stock solution by dissolving 10 oz of a Microbe Remedy in 1 gallon of clean potable water. Run stock solution through injector system @ 1 : 100 dilution & apply at the rate of 10 gal per 1000 sq ft of table space (assuming pot to pot). <b>VERY IMPORTANT</b> . Continue with secondary bud initiation by keeping temps low at 59F to set the secondary flower buds. |
| 12 Jan         | 12                | 2"-3" tall. Bud initiation coincides with stem root development. Keep the temp at 59F day/night until bud set is complete.                                                                                                                                                                                                                                                                     |
| 19 Jan         | 11                | 3"-4" tall. Plant growth regulator applications should NOT be needed at all, unless they are grown very tight. Bud initiation period is nearly complete, please maintain the cool temperature at 59F until done.                                                                                                                                                                               |
| 26 Jan         | 10                | Check for bud set, if good to go, now you can increase to 65F. Please keep greenhouse abit cooler by seeting it at 62F if ahead of schedule.                                                                                                                                                                                                                                                   |
| 2 Feb          | 9                 | 5"-6" tall. Adjust temperatures as needed. Must now space the lilies to avoid stretching or use a PGR spray. Only apply Fascination (10ppm) to lower leaves 7 to 10 days before visible bud if leaf yellowing is evident.                                                                                                                                                                      |
| 9 Feb          | 8                 | Check for aphids & root problems. Apply systemic or biological pest control sometimes during weeks 10, 9, or 8. Soil test & if leaf scorch is evident, use some calcium nitrate. Make sure to check the EC levels before application.                                                                                                                                                          |
| 16 Feb         | 7                 | 7"-8" tall. Lilies reach half of final height 42 days before sale. The flower buds can now be felt. If buds are visible on early plantings run 62F until finish.                                                                                                                                                                                                                               |
| 23 Feb         | 6                 | 35 days to sale. Buds to be visible no later than 30 days prior to sale. Grade for uniformity as buds become visible.                                                                                                                                                                                                                                                                          |
| 2 March        | 5                 | Buds 0.5" to 1" long. Re-apply Fascination (10 ppm) to lower leaves. (Only if necessary, when spaced too late). A late season Ancymidol spray of 15ppm (Topflor) can be applied to avoid stretching (Most likely this is not needed)                                                                                                                                                           |
| 8 March        | 4                 | Buds 1" to 1.5" long, some will start bending down.                                                                                                                                                                                                                                                                                                                                            |
| 15 March       | 3                 | Buds 1.5" to 2" long. If aphids present, use a total release smoke or aerosol.                                                                                                                                                                                                                                                                                                                 |
| 22 March       | 2                 | Buds 2.5" to 4" long, some turning puffy white. Stop fertilizing just before sale & apply clear water once. If need, cool lilies at 35-45F to hold. Prior to cold storage or shipping pots, you can spray Fascination (100 ppm) over the entire plant.                                                                                                                                         |
| 29 March       | 1                 | Palm Sunday. Shade lilies once removed from storage. If needed, use an ethylene type blocker pior to shipping.                                                                                                                                                                                                                                                                                 |
| 5 April        | 0                 | Easter 2026                                                                                                                                                                                                                                                                                                                                                                                    |
